Deal Signals

An always-on off-market deal finder

Product overview • Available on the Plus plan • This document will evolve as development continues

The Problem Investors Face Today

Multifamily deals rarely hit the market. The listings that do get posted are picked over almost immediately — every serious buyer bidding on the same handful of properties. The real opportunities are off-market: owners who are quietly becoming sellers because of a tax lien, a pre-foreclosure, an estate situation, or simply twenty years of ownership and a pile of untapped equity.

Institutional buyers have acquisition teams that dig for these owners full-time. Individual investors don't. For them, off-market sourcing means pulling county lists, cross-referencing spreadsheets by hand, and cold-mailing blind — a full-time job on top of everything else. Almost nobody sustains it.

What Deal Signals Does

Deal Signals is a background agent inside MultifamilyOS that does that sourcing work continuously. It watches each user's target markets for motivation signals on properties that were never listed — pre-foreclosure, foreclosure, scheduled auction, REO, owner death or probate, tax delinquency, and vacancy — weighted further by factors like long-held absentee ownership and high equity position.

Critically, Deal Signals detects **change** — not "here's a list of properties with liens," but "this property just picked up a lien, and it matches your criteria." Signals that stack on a single property score higher, and you're alerted the moment one fires.

Every property that fires a signal is a single click from the tools investors already use inside MultifamilyOS:

- 1 Owner lookup**
Identify who owns the property and how to reach them.
- 2 Personalized outreach letter**
Generate a tailored letter to start the conversation.
- 3 Pipeline tracking**
Move the opportunity into your existing deal pipeline.

Signals We Track

Deal Signals continuously monitors public and licensed data sources for indicators that an owner may be approaching a sale — even when the property has never been listed. These signals can trigger an alert on their own:

- Pre-foreclosure and foreclosure filings
- Scheduled auction

- REO (bank-owned)
- Owner death / probate
- Tax delinquency
- Vacancy indicators

Long-held absentee ownership and high equity position are also factored in — they don't trigger an alert by themselves, but they strengthen the score when they show up alongside one of the signals above.

This list will expand as we validate additional signal types and refresh cadences with our data partners during development.

Why It Matters

Moves you up the value chain

Instead of only helping you analyze and pursue deals you've already found, MultifamilyOS becomes the place your deals come from in the first place.

Closes the loop, end to end

List vendors sell raw data and stop there. Deal Signals connects signal to identified owner to outreach to pipeline — in one platform, purpose-built for multifamily.

Built on your own criteria

Deal Signals runs on markets and property criteria you set up specifically for it, plus a signal-weighting configuration tuned to your investment strategy — so it isn't resurfacing the same handful of properties every week, it's surfacing the ones where something has actually changed and actually fits what you're looking for.

A reason to check back in

An alert with a real opportunity in it is worth opening. That's a habit, not just a feature.

Market Watch

Off-market signals are the main event, but they're rare by nature — most weeks, nothing fires. To keep your markets visible in between, Deal Signals also surfaces on-market activity: newly listed properties and price reductions in your target markets. It's lower-stakes context, not a signal — a listing going active or a price drop doesn't mean an owner is quietly motivated, it just means something worth knowing happened nearby.

Availability

Deal Signals is included with the **Plus** plan, alongside your full AI-powered deal team — Acquisitions Director, Marketing Assistant, Underwriting Manager, Legal Department, and Investor Relations Specialist.
