Activate Email in MultifamilyOS

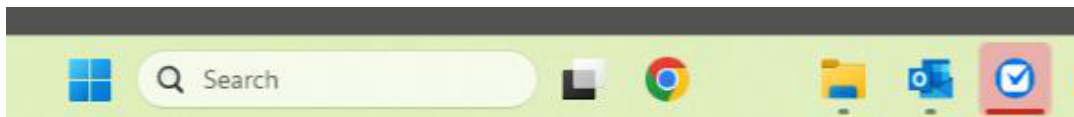

Setting up Mailto through your web browser

Setup guide • Windows • Google Chrome

This guide walks through activating email so you can send messages directly to property owners from MultifamilyOS through your web browser. The steps below use Google Chrome — if you use a different browser, such as Microsoft Edge, look for that browser in your applications and follow the same steps.

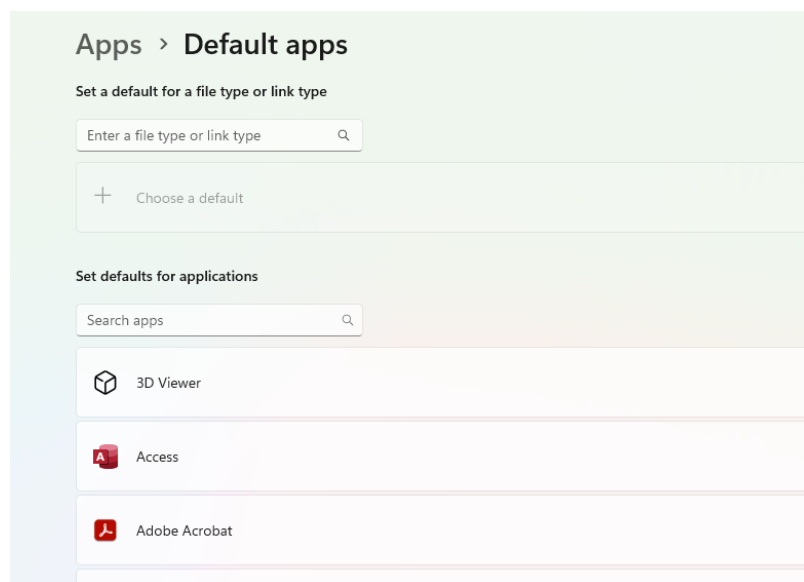

1 Open the Apps search

From your computer's search bar, type in 'Apps'.

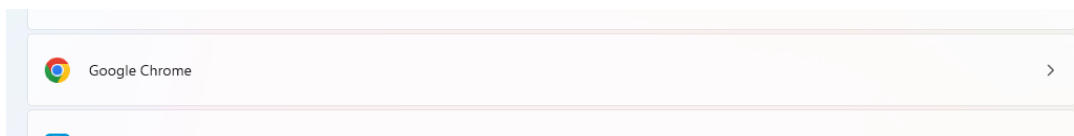

2 Choose Default Apps

From Apps, choose the 'Default Apps' option.

3 Select your browser

Scroll down to your web browser and select it. For this guide we're using Google Chrome, but if you use another browser like Microsoft Edge, look for that browser in your applications and complete these instructions.

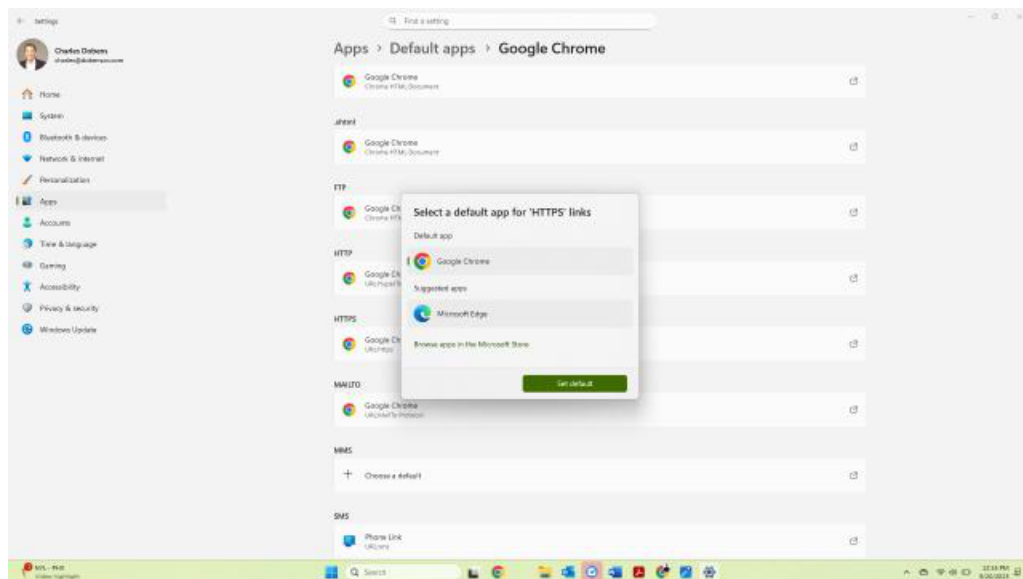

4 Select the Mailto option

Scroll down to the 'Mailto:' option and click it.

5 Set your browser as default

Choose your browser as the default for Mailto links.

6 You're all set

You should now be ready to start sending emails to property owners in MultifamilyOS.
